

A collection of flights for the "Great White North." (Canada)

This is a collection of flights for the **Central** part of Canada and covers locations in Ontario and Manitoba.

NOTE :- Flights numbered CC-001 to CC-052 are 'normal' FSNavigator planned flights. However, flights numbered CC-001-VAT to CC-020-VAT have been created for on-line flying when using the VATSIM network.

Canada has a diverse range of terrain to offer pilot's. From the East coast, where the worlds highest tides are, through the expanse of the Prairies, to the Rocky mountains on the west coast and across vast regions throughout the country that are still considered 'untouched' wilderness. Finally the north, where one could fly for hours and not see civilization.

Canada has been blessed with all four season's. For flights numbered CC-001 to CC-052, I would suggest that you download 'Real World Weather' to increase the enjoyment and challenge in these flights. Because flights CC-001-VAT to CC-020-VAT are for flying on-line using the VATSIM network, the real world weather is automatically downloaded for these flights.

There are three sets of flight plans included for the Central Canadian series.

- a) The .fsn FSNavigator files for use **without VATSIM** (named CC-001 to CC-052) (Place these in your FSNav 'Plan' folder)
- b) The .fsn FSNavigator files for use **with VATSIM on-line flights.** (named CC-001-VAT to CC-020-VAT) (Place these in your FSNav 'Plan' folder)
- c) The .sbp SquawkBox files. (named CC-001-VAT to CC-020-VAT, same name as the .fsn files, but they are a different format) (Place these in your SquawkBox main folder).

VATSIM FLIGHTS

NOTE:- The ATC controller might request changes to your flight plan at any time for various reasons. For example, they may fly you at a different altitude than the plan, for proper traffic separation in their area. Unless the controller is mistakenly flying you into a dangerous situation, any changes they give you are to be followed. Make sure you study your original FSNavigator flight plan carefully as well, so you are well briefed on what the plan is prior to seeking departure clearance. You'll grasp any changes easier when and if they happen.

NOTE:- These VATSIM flight plans assume that you **DO NOT** have airport and procedure charts. Therefore, they don't reflect proper **SID** or **STAR** departure and approach information for these airports. A controller may choose to vector you through a procedure that will slightly vary the plans.
