

INSTALLING THE MARKET GARDEN FILES X-PLANE

1. Extract (unzip) the file “**XP Market Garden.zip**” to a folder of your choice.

2. Copy or Move the “**Market Garden**” folder to your **X-Plane 11/Custom Scenery** folder (do not confuse with Custom Data)

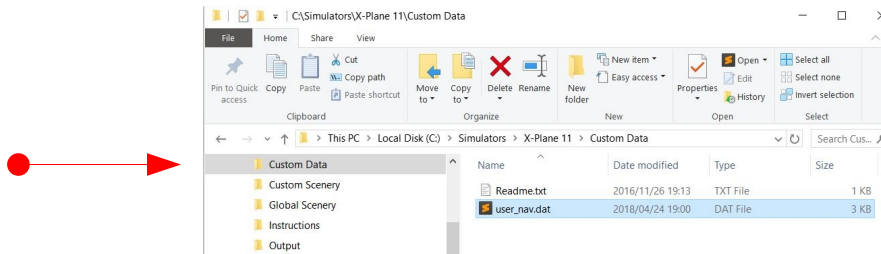

3. This will install the object files for the ships at Tampa, Bermuda and Columbia as well as the flare markers (black smoke only) for Ellis IP and the drop zones.

4. Please remove the “Market Garden” folder after the event.

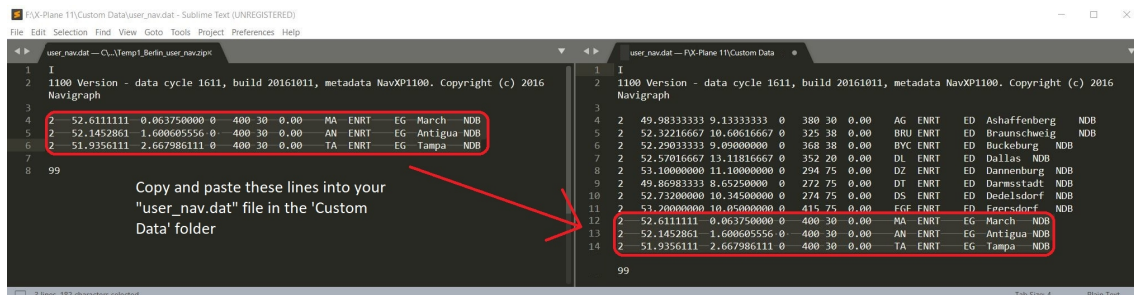

Installing the 3 NDBs

5. Installing the 3 NDBs used for Market Garden will involve copying a file, “**user_nav.dat**” to your “**X-Plane 11/Custom Data**” folder.

6. By default, there should not be a “**user_nav.dat**” file in the ‘**Custom Data**’ folder, but if you do have one you should not overwrite it.

7. Follow the procedure below to append the 3 lines of text to your existing file:

8. You should be able to see the three NDBs in your X-plane Map:

NAME	FREQ	IDENT	RANGE
March	400	MA	10
Antigua	400	AN	10
Tampa	400	TA	10
